

AWS Public Sector Case Study

Klésia - Cloud-powered agility

About Klésia

KLÉSIA

Klésia is a French pension fund organization founded in 2012 providing health protection solutions, pension and solutions for retirees in France, depending on the Agirc-Arrco pension fund. The company employs about 3000 people both in Paris and province.

THE CHALLENGE

Klésia was developing a project called “Ma boussole” aiming at providing guidance, testimonials, local contacts and financial eligibility tools to helpers of people suffering from Alzheimer, Parkinson or stroke.

The demo environment had to be deployed within 2 months. Elasticity and agility were paramount, as far as HDS and GDPR security standards.

Klésia faced issues to develop an organization and a global infrastructure able to run “Ma Boussole”, so Gekko helped to develop new practices and platform.

THE SOLUTION

Gekko provided Well-Architected Framework expertise and AWS tools giving Klésia the ability to develop agile practice and fast release management on a security and compliant by design platform.

The platform has been released in 3 weeks and runs mainly with AWS products and services. Jenkins, Ansible and Github enable DevOps practices and automation. From a business perspective, SysOps were integrated in agile teams. Gekko MSP ensures run activities with a dedicated management team to coordinate with Klésia.

THE BENEFITS

Citizen experience

Deep positive impact on society.
Elasticity (scaling x3), faster releases, lower lead time. Team collaboration.

Agile and DevOps model

Agile and DevOps delivery model.
Fully-managed platform and automation. Proactivity.

Security and compliance

Security best practices and well-architected platform. Security, HDS and GDPR compliance by design.

ABOUT GEKKO AND AWS

Gekko is a consulting company providing services and expertise in Cloud computing & DevOps helping its customers through a strong technical expertise and a deep business knowledge.

Organizations using a DevOps model deliver applications quicker and innovate faster. AWS offers infrastructure resources designed to support continuous integration and delivery, infrastructure as code, microservices, and monitoring & logging.
